Brown Bear State Park	Green	<1
Mouth of Rock Creek	Green	43
Mouth of Thomposon Creek	Green	46
Blue Heron Landing	Green	2
Mid-Lake	Green	<1

E. coli Risk Levels

Low Risk: Green < 126*
 Moderate Risk: Yellow 127-406*
 High Risk: Red > 406*
 *E. coli per 100ml

Each week during the recreation season the Devils Lake Water Improvement District tests and monitors the waters of Devils Lake for E. coli and Harmful Algal Blooms. A team of dedicated volunteers and staff conduct the weekly samples to keep residents and users of the lake informed of potentially dangerous levels. Testing for Harmful algal blooms takes place only when a major bloom is apparent due to the expense of the test. If a test is determined to be necessary, the results will be posted to dlwid.org as soon as they are available. Have a Happy Labor Day!

It is important to keep in mind that E. coli is a natural part of a lake system. Humans have naturally occurring E. coli bacteria in their intestines, but people and animals alike can become infected with the strand of E. coli 0157:H7 that commonly occurs in undercooked foods, contaminated water, and feces. This data is for your information only, and does not indicate a closure or an actual advisory, but is posted here to serve as a guide to water quality in and around Devils Lake.
