E. coli Risk Levels
 Low Risk: Green < 126*
 Moderate Risk: Yellow 127-406*
 High Risk: Red > 406*
 *E. coli per 100ml

Each week during the recreation season the Devils Lake Water Improvement District tests and monitors the waters of Devils Lake for E. coli and Harmful Algal Blooms. DLWID staff conducts the weekly samplings to keep residents and users of the lake informed.

It is important to keep in mind that E. coli is a natural part of a lake system. Humans have naturally occurring E. coli bacteria in their intestines, but people and animals alike can become infected with the strand of E. coli O157:H7 that commonly occurs in undercooked foods, contaminated water, and feces. This data is for your information only and does not indicate a closure or an actual advisory but is posted here to serve as a guide to water quality in and around Devils Lake.
