Water Quality Briefing

Exceedingly high clarity in most parts of Devils Lake with visibility beyond 15' in some areas. We continue to see positive dissolved oxygen trends on the lake bottom of more than 95% saturation. Some increased minor algae growth is present but does not appear problematic currently. Water temps are warming and are at over 73 degrees f. Typically August and September produce the heaviest concentrations of algae as the lake waters warm to over 75 degrees f.
